

Matrox Supersight >>>

High-density computing platform for demanding industrial imaging

Overview

High-density computing with full-size expansion

Matrox® Supersight is a high-density industrial computing platform capable of accommodating up to four computers in a standard 4U enclosure. Each computer or compute cluster is equipped with an embedded Intel[®] Core[™] processor, and works alone or together with the others to implement distributed computing. A high-speed PCIe® switched fabric backplane ensures efficient communication and data exchange between compute clusters as necessary. The same backplane accepts full-size PCIe expansion cards for a broad range of image acquisition, network interface, processing offload, and acceleration options from Matrox Imaging and third parties. Matrox Supersight vision controllers—Matrox Supersight Solo, Matrox Supersight Duo, and Matrox Supersight Quad—are fully supported by Matrox Imaging Library (MIL) X, an established collection of software tools for developing industrial imaging applications; this software development kit (SDK) helps developers deliver a complete solution in a timely manner. Backed by a carefully managed lifecycle and consistent long-term availability, the Matrox Supersight series provides a solid foundation for demanding machine vision applications.

Intel Core i7 power and PCIe Gen3 expansion

The Matrox Supersight delivers a high degree of computing performance and image-acquisition flexibility. With its scalable design, it provides the necessary level of performance required by complex machine-vision applications. Each System Host Board (SHB) is powered by an Intel Core i7 processor and can communicate with each other at high speed through a PCIe Gen3 switched fabric backplane. Each system accepts up to 10 full-length and one half-length full-height PCIe cards to suit a wide range of requirements. Matrox Supersight supports image-acquisition boards for all major interfaces—whether analog, Camera Link®, CoaXPress®, DisplayPort™, DVI, GigE Vision®, HDMI™, and SDI—as well as image processing offload using a field-programmable gate array (FPGA). Users can combine the required boards to build a robust, flexible platform for intensive image capture and processing tasks.

Consistent long-term availability

Carefully selected components, coupled with strict change control, ensures consistent long-term supply of the Matrox Supersight. This allows OEMs to maximize return on the original investment without incurring additional costs associated with repeated validation of constantly changing mainstream commercial platforms.

Switched fabric backplane

A unique PCIe Gen3, multi-segmented backplane provides the switched fabric to configure acquisition and processing elements in either one, two, or four computing clusters. The uniqueness of this backplane is that add-in cards can be plugged into any slot and still be assigned to an SHB, even if the card is in a different segment. With 11 PCIe Gen3 slots available, the backplane provides excellent expansion opportunities for Matrox Imaging and third-party video capture, accelerator/co-processor, graphics, and general I/O boards to fulfill the needs of demanding imaging applications.

Matrox Supersight at a glance

Scale system performance from one to four computing clusters for demanding image acquisition and processing needs

Support any camera interface type with the addition of appropriate Matrox Imaging frame grabber board(s)

Exchange data between compute clusters internally at high speed through a PCIe Gen3 switched fabric backplane

Maximize density in a 4U chassis with up to 10 full-length and one half-length, full-height PCIe Gen3 slots

Tailor host data transfer bandwidth needs through PCIe x16. x8, and x4 interfaces

Minimize the need for revalidation by utilizing a lifecyclemanaged platform with consistent long-term availability

Simplify system integration by using an integrated platform from a single vendor

Solve applications rather than develop underlying tools by leveraging standard Microsoft® development tools and $\underline{\text{MIL }X}$ software

Matrox Supersight PCIe Gen3 backplane

Characteristics

Matrox Supersight SHB

- 1. Four DDR4 2666 Mbps DIMM sockets
- 2. Intel CPU
- 3. Internal DisplayPort
- 4. Intel Q370 PCH
- 5. Six SATA III interfaces
- 6. Two internal USB 3.1 headers
- 7. Six internal USB 2.0 headers
- 8. VGA port
- 9. Two Gigabit Ethernet ports
- 10. Two USB 3.1 ports
- 11. Internal USB 2.0 headers
- 12. Three internal RS-232 headers
- 13. One internal RS-422/RS-485 headers

Configurations

Configurations (cont.)

Configurations (cont.)

Configurations (cont.)

Characteristics (cont.)

Power and storage

A 1,000 W power supply lets the Matrox Supersight system accommodate multiple frame grabber, graphics, and other add-in boards. Integrated 2.5 inch hard drives provide a greater level of shock and vibration resistance over standard desktop models. Quick-release, hot-swappable drive bays with RAID support increase system reliability and facilitate maintenance.

Image acquisition options

Matrox Imaging offers the industry's most comprehensive line of image acquisition boards for all major interfaces including Camera Link, CoaXPress, DisplayPort, DVI, GigE Vision, HDMI, and SDI, as well as standard and non-standard analog. Refer to the individual Matrox Imaging frame grabber datasheets for more information.

CPU offload

FPGA-based image processing is a powerful addition to an image acquisition board, relieving the host processor(s) without consuming additional slots. Refer to the individual <u>Matrox Imaging frame grabber datasheets</u> for more information.

Software Environment

Microsoft Windows 10 IoT Enterprise

Matrox Supersight comes pre-loaded with Microsoft Windows® 10 IoT Enterprise (64-bit), which provides the familiarity, functionality, performance, and reliability of standard Windows 10 Enterprise.

Field-proven application development software

A complete imaging platform must include not only hardware but also robust software tools. MIL X^1 is a comprehensive SDK with a 25-year history of reliable performance. This toolkit features interactive software and programming functions for image capture, processing, analysis, annotation, display, and archiving operations, with the accuracy and robustness needed to tackle the most demanding applications. Particularly useful for the Matrox Supersight is Distributed MIL (DMIL), a functionality that enables the partitioning of an application across multiple compute clusters with efficient command and data exchange. Refer to the MIL X datasheet for more information.

MIL X is licensed for the Matrox Supersight on a per-chassis basis. Matrox Supersight vision controllers automatically grant access to the MIL X interface (GenTL, GigE Vision, and USB3 Vision), DMIL, and industrial/robot communications run-time functionality.

Specifications

Matrox Supersight		
SHB		
PCIe Gen3 x16 and x4 host interfaces ²		
Intel® Q370 PCH		
LGA1151 socket		
Intel Core i7-8700 processor		
Integrated Intel UHD graphics 630		
One (1) VGA on I/O bracket		
One (1) DisplayPort 1.2 on SHB board		
Four (4) 240-pin DDR4 long-DIMM sockets		
Up to 64 GB DDR4-2666 SDRAM		
Six (6) SATA III 6.0 Gbps ports with raid 0, 1, 5, and 10 support		
Six (6) ports on SHB main board		
One (1) port shared on M.2 Key M connector		
Two (2) Gigabit Ethernet ports (10/100/1,000)		
Eleven (11) USB ports		
Two (2) USB 3.1 on I/O bracket		
Two (2) USB 3.1 via PCB headers		
One (1) USB 2.0 on SHB main board		
Six (6) USB 2.0 via PCB headers		
Three (3) RS-232 and one (1) RS-422/485 serial ports via PCB header connector		
One (1) PS/2 combo connector		
11-slot PCIe Gen3 backplane		
Up to four (4) host slots		
PCIe Gen3 x16 and a PCIe Gen3 x4 interfaces²		
Up to ten (10) PCIe x8 and one (1) x4 slots (all mechanically x16) ²		
If SHB is not installed then a x16 slot is available in that cluster		
Memory		
16 GB DDR4-2666		
Storage		
Up to four (4) 2.5 in SATA devices ³		
Chassis		
Dimensions (L x W x H): 52.4 x 48.2 x 17.8 cm (20.6 x 19.0 x 7.0 in)		
Mounting		
Horizontal		
19 in rackmount		
Removable rack ears		
Removable rack handles		
Drive bays		
Front-accessible		
Four (4) 2.5 in, hot-swappable bays

Ordering Information

Part number	Description	
Hardware		
S-S0L07-MTRX	Matrox Supersight with single SHB featuring an Intel Core i7-8700, 16 GB DDR4 SDRAM, 500 GB HDD, and Microsoft Windows 10 IoT Enterprise 2019. Unit features a 7-slot PCIe Gen3 backplane and 1,000 W power supply. Pre-licensed for MIL X interface (GenTL, GigE Vision, and USB3 Vision), DMIL, and MIL X industrial communications packages. Note: The use of this product is governed by Microsoft Software License Terms among others.	
S-SOLO-MTRX	Matrox Supersight with single SHB featuring an Intel Core i7-8700, 16 GB DDR4 SDRAM, 500 GB HDD, and Microsoft Windows 10 IoT Enterprise 2019. Unit features an 11-slot PCIe Gen3 backplane and 1,000 W power supply. Pre-licensed for MIL X interface (GenTL, GigE Vision, and USB3 Vision), DMIL, and MIL X industrial communications packages. Note: The use of this product is governed by Microsoft Software License Terms among others.	
S-DUO-MTRX	Matrox Supersight with two SHBs featuring an Intel Core i7-8700, 16 GB DDR4 SDRAM, 500 GB HDD, and Microsoft Windows 10 IoT Enterprise 2019. Unit features a 10-slot PCIe Gen3 backplane and 1,000 W power supply. Pre-licensed for MIL X interface (GenTL, GigE Vision, and USB3 Vision), DMIL, and MIL X industrial communications packages. Note: The use of this product is governed by Microsoft Software License Terms among others.	
S-QUAD-MTRX	Matrox Supersight with four SHBs featuring an Intel Core i7-8700, 16 GB DDR4 SDRAM, 500 GB HDD, and Microsoft Windows 10 IoT Enterprise 2019. Unit features an eight-slot PCIe Gen3 backplane and 1,000 W power supply. Pre-licensed for MIL X interface (GenTL, GigE Vision, and USB3 Vision), DMIL, and MIL X industrial communications packages. Note: The use of this product is governed by Microsoft Software License Terms among others.	
Software		
Refer to MIL X datasheet.		

Endnotes:

- The software may be protected by one or more patents; see www.matrox.com/patents for more information.

 2. PCle connectors are all x16 mechanical but not electrical.

 3. SSD available on demand. Contact Matrox.lmaging.sales..

The Matrox Imaging advantage

Assured quality & longevity

Adhering to industry best practices in all hardware manufacturing and software development, product designs pay careful attention to component selection to secure consistent long-term availability. Matrox Imaging is able to meet Copy Exact and Revision Change Control procurement requirements in particular circumstances, backed by a dedicated team of QA specialists.

Trusted industry standards

Matrox Imaging champions industry standards in its design and production. Leveraging these standards to deliver quality compatible products, Matrox Imaging protects its customers' best interests by ensuring hardware and software components work with as many third-party products as possible.

Comprehensive customer support

Devoted front-line support and applications teams are on call to offer timely product installation, usage, and integration assistance. Matrox Professional Services delivers deep technical assistance to help customers develop their particular applications in a timely fashion. Services include personalized training and device interfacing as well as application feasibility, prototyping, troubleshooting, and debugging.

Tailored customer training

Matrox Vision Academy comprises online and on-premises training for Matrox Imaging vision software tools. On-premises intensive training courses are regularly held at Matrox headquarters, and can also be customized for onsite delivery. The Matrox Vision Academy online training platform hosts a comprehensive set of on-demand videos available when and where needed.

Long-standing global network

Matrox Imaging customers benefit from a global network of distributors who offer complementary products and support, and integrators who build customized vision systems. These relationships are built on years of mutual trust and span the globe, ensuring customer access to only the best assistance in the industry.

About Matrox Imaging

Founded in 1976, Matrox is a privately held company based in Montreal, Canada. Imaging and Video divisions provide leading component-level solutions, leveraging the others' expertise and industry relations to provide innovative, timely products.

Matrox Imaging is an established and trusted supplier to top OEMs and integrators involved in machine vision, image analysis, and medical imaging industries. The components consist of smart cameras, 3D sensors, vision controllers, I/O cards, and frame grabbers, all designed to provide optimum price-performance within a common software environment.
